From DC to 18.0 GHz, the HP 11636A provides excellent output power symmetry between the two output ports. Low temperature and power coefficients ensure attenuation stability. Each power divider is calibrated at four frequencies, and this data is provided on a sticker that is permanently attached to the unit.

Stable interface dimensions, which ensure long life and a high repeatability of insertion loss, are provided by injection molded interface connector insulators that maintain concentricity.

Any port may be used as an input, as the HP 11636A provides a symmetrical 6 dB division. The HP 11636A can be used as a power combiner. When signals are input at two of the ports, the sum of the two appears at the third.
